Chapter 1. Sum Up

What is the Sum up of numbers?

Here you will learn what is Sum up of numbers.

Figure 1. Calculator

To successfully perform the task of summing up of numbers, you must know what is addition. The term "Addition" represents a mathematical operation. Addition is a process that you perform using numbers. It lets you find the sum of two numbers. In the App, you must use the plus (+) button to perform the sum up or addition operation. In the sum up process, we take a number and increase it to a bigger number. We do this by combining one number with another to get a total.

How to sum up numbers

Here you will find instructions about using the Sum up feature of the JPS Calculator.

To successfully sum up numbers, you must know what is sum up or addition.

1. Enter the first number.
2. Press the plus(+) button.
3. Enter the second number.
4. Press the equal (=) button.

The result from the sum up is displayed.

You want to sum up 2 with 3. The equation will look like $2+3=5$. For this, first you enter 2. Press plus button. Then you enter 3. Now press equals button. The result 5 appears on the screen.

Chapter 2. Subtract

What is the Subtraction of numbers?

Here you will learn what is subtraction.

Figure 2. Calculator

To successfully perform the task of subtracting numbers, you must know what is subtraction. The term "Subtraction" represents a mathematical operation. Subtraction is a process that you perform using numbers. It lets you find the difference of two numbers. In the App, you must use the minus (-) button to perform the subtraction operation. In the subtraction process, we take a number and reduce it to a smaller number. We do this by taking away one number from another.

How to subtract numbers

Here you will find instructions about using the Subtract feature of the JPS Calculator.

To successfully subtract numbers, you must know what is subtraction

1. Enter the first number.
2. Press the minus (-) button.
3. Enter the second number.
4. Press the equal (=) button.

The result from the subtraction is displayed.

You want to subtract 5 from 6. The equation will look like $6-5=1$. You enter 6. Press minus button. Then enter 5. Press equals button. The result 1 appears on the screen.

Chapter 3. Multiply

What is the Multiplication of numbers?

Here you will learn what is Multiplication of numbers.

To successfully perform the task of multiplying numbers, you must know what is multiplication. The term "Multiplication" represents a mathematical operation. Multiplication is a process that you perform using numbers. It lets you find the product of two numbers. In the App, you must use the multiply (\times) button to perform the multiplication operation. In this process, we take a number and increase it to a larger value by combining it multiple times. We do this by multiplying one number by another to get the total product.

How to multiply numbers

Here you will find instructions about using the Multiplication feature of the JPS Calculator.

To successfully multiply numbers, you must know what is multiplication or product of numbers.

1. Enter the first number.
2. Press the multiply (\times) button.
3. Enter the second number.
4. Press the equal ($=$) button.

The result from the multiplication is displayed.

You want to multiply 5 with 3. The equation will look like $5 \times 3 = 15$. For this, first you enter 5. Press multiply button. Then you enter 3. Now press the equals button. The result 15 appears on the screen.

Chapter 4. Divide

What is the Division of numbers?

Here you will learn what is Division of numbers.

To successfully perform the task of dividing numbers, you must understand what division is. The term "Division" represents a mathematical operation used to split a number into equal parts. Division is a process you perform using numbers. It lets you find out how many times one number is contained within another. In the App, you must use the divide (\div) button to perform the division operation. In this process, we take a larger number and break it down into smaller, equal groups by dividing it by another number.

How to divide numbers

Here you will find instructions about using the Division feature of the JPS Calculator.

To successfully divide the numbers, you must know what is division.

1. Enter the first number.
2. Press the divide (\div) button.
3. Enter the second number.
4. Press the equal (=) button.

The result from division is displayed.

You want to divide 6 by 3. The equation will look like $6 \div 3 = 2$. For this, first you enter 6. Press divide button. Then you enter 3. Now press the equals button. The result 2 appears on the screen.
